Guide 5: UI Mockup Generator — Complete PRD

"Idea Se Live HTML Mockup"

Document:	UI Mockup Generator — Feature PRD v1.0
Feature:	Deep Dive — Visual Website Preview
Date:	June 2026
Status:	Final — Ready for Development

1. Feature Overview

UI Mockup Generator lazy-loaded visual output hai. User selected idea ke liye complete HTML/CSS mockup generate karta hai. Ye sirf wireframe nahi — production-ready looking webpage hai with real content, colors, typography, aur responsive design. User device toggle kar sakta hai: Desktop, Tablet, Mobile.

Key Differentiator: Most tools sirf text description dete hain. Hum live HTML preview dete hain jo directly browser mein render hota hai. User export karke apne project mein use kar sakta hai.

2. User Flow & Interaction Design

- Step 1: User idea select karta hai → Blueprint tabs appear
- Step 2: User 'UI Mockup' tab click karta hai
- Step 3: System UIDesignerAgent trigger karta hai (background/async)
- Step 4: Loading: 'Designing your website...' with palette animation
- Step 5: Mockup iframe mein render hota hai — complete webpage
- Step 6: Device toggle: Desktop (100%), Tablet (768px), Mobile (375px)
- Step 7: User can: Export HTML, View Source Code, or Regenerate with different style

3. UIDesignerAgent Architecture

UIDesignerAgent ek specialized LLM agent hai jo selected idea + blueprint se complete HTML/CSS mockup generate karta hai. Input: Selected idea, blueprint (user flow + features), user profile, style preference. Output: Complete HTML file with Tailwind CSS via CDN.

Design Rules: Use Tailwind CSS via CDN (no build step), Include ALL sections from blueprint's user flow, Use real content (not lorem ipsum), Use placeholder images from picsum.photos, Responsive design mobile-first, Dark theme default, Interactive elements (hover, forms, toggles), Accessibility: proper contrast, alt text, semantic HTML.

Component Requirements: Header (Logo + Nav + CTA), Hero (Headline + Subheadline + CTA + Image), Features (3-4 cards with icons), How It Works (3-step process), Testimonials (2-3 quotes), CTA Section, Footer.

4. Responsive Design Strategy

Desktop (1024px+)

Full layout: 2-column hero, 3-4 feature cards side-by-side, horizontal navigation, large images.

Tablet (768px-1023px)

Adjusted layout: 2-column hero, 2 feature cards per row, hamburger menu, medium images.

Mobile (320px-767px)

Stacked layout: Single column hero, 1 feature card per row, hamburger menu, small images, touch-friendly buttons (min 44px).

Device Toggle Implementation

React component with state management. 3 buttons: Desktop, Tablet, Mobile. Click pe iframe width change hota hai: Desktop=100%, Tablet=768px, Mobile=375px. Height fixed at 800px with scroll. Border and shadow for realistic preview.

5. Database Schema

```
model UiMockup { id String @id @default(uuid()) ideaId String @unique idea Idea
@relation(fields: [ideaId], references: [id]) projectId String @unique project
Project @relation(fields: [projectId], references: [id]) html String // Complete
HTML file css String // Additional CSS components json Json // Component breakdown for
editing styleVariant String // MODERN | MINIMAL | CYBERPUNK | CORPORATE | PLAYFUL
mobileNotes String? // Mobile considerations tabletNotes String? // Tablet
considerations createdAt DateTime @default(now()) }
```

6. Export & Regeneration

Export HTML

Complete HTML file download. User apne project mein directly use kar sakta hai.

Export ZIP

HTML + CSS + assets folder. Organized file structure for further development.

View Source

Code editor mein HTML/CSS directly edit kar sakta hai. Syntax highlighting ke saath.

Regenerate

Same idea, different style. User Modern, Cyberpunk, Minimal select karke naya mockup generate kar sakta hai.

7. Interview Talking Points

Why HTML/CSS Instead of Figma/Sketch?

Figma sirf design hai, code nahi. HTML/CSS directly usable hai — browser mein render hota hai, copy-paste karke project mein daal sakta hai. Plus no design tool license needed.

How Do You Ensure Quality?

Tailwind CSS CDN se consistent styling. Real content (AI-generated) instead of lorem ipsum. Accessibility checks: contrast ratios, semantic HTML, alt text. Responsive breakpoints: mobile-first approach.

What About Images?

picsum.photos se placeholder images — real-looking hain, copyright-free hain. Future mein AI image generation (DALL-E/Stable Diffusion) integrate kar sakte hain for custom illustrations.

Why Lazy-Loaded for UI Too?

HTML generation bhi expensive hai — ~2000-3000 tokens. 5 ideas x 3 devices = 15 generations. Lazy loading se sirf selected idea x 1 device = 1 generation. 93% cost saving.
